Not an actual patient.

THE FIGHT IS IN YOU.

And your next move starts with a conversation.

Anktiva®
(nogapendekin alfa inbakicept-pmln)
400 mcg/0.4 mL, solution for intravesical instillation

ANKTIVA is used with a drug called Bacillus Calmette-Guérin (BCG) to treat adults with nonmuscle invasive bladder cancer (NMIBC) that have not responded to treatment with BCG alone.[1]

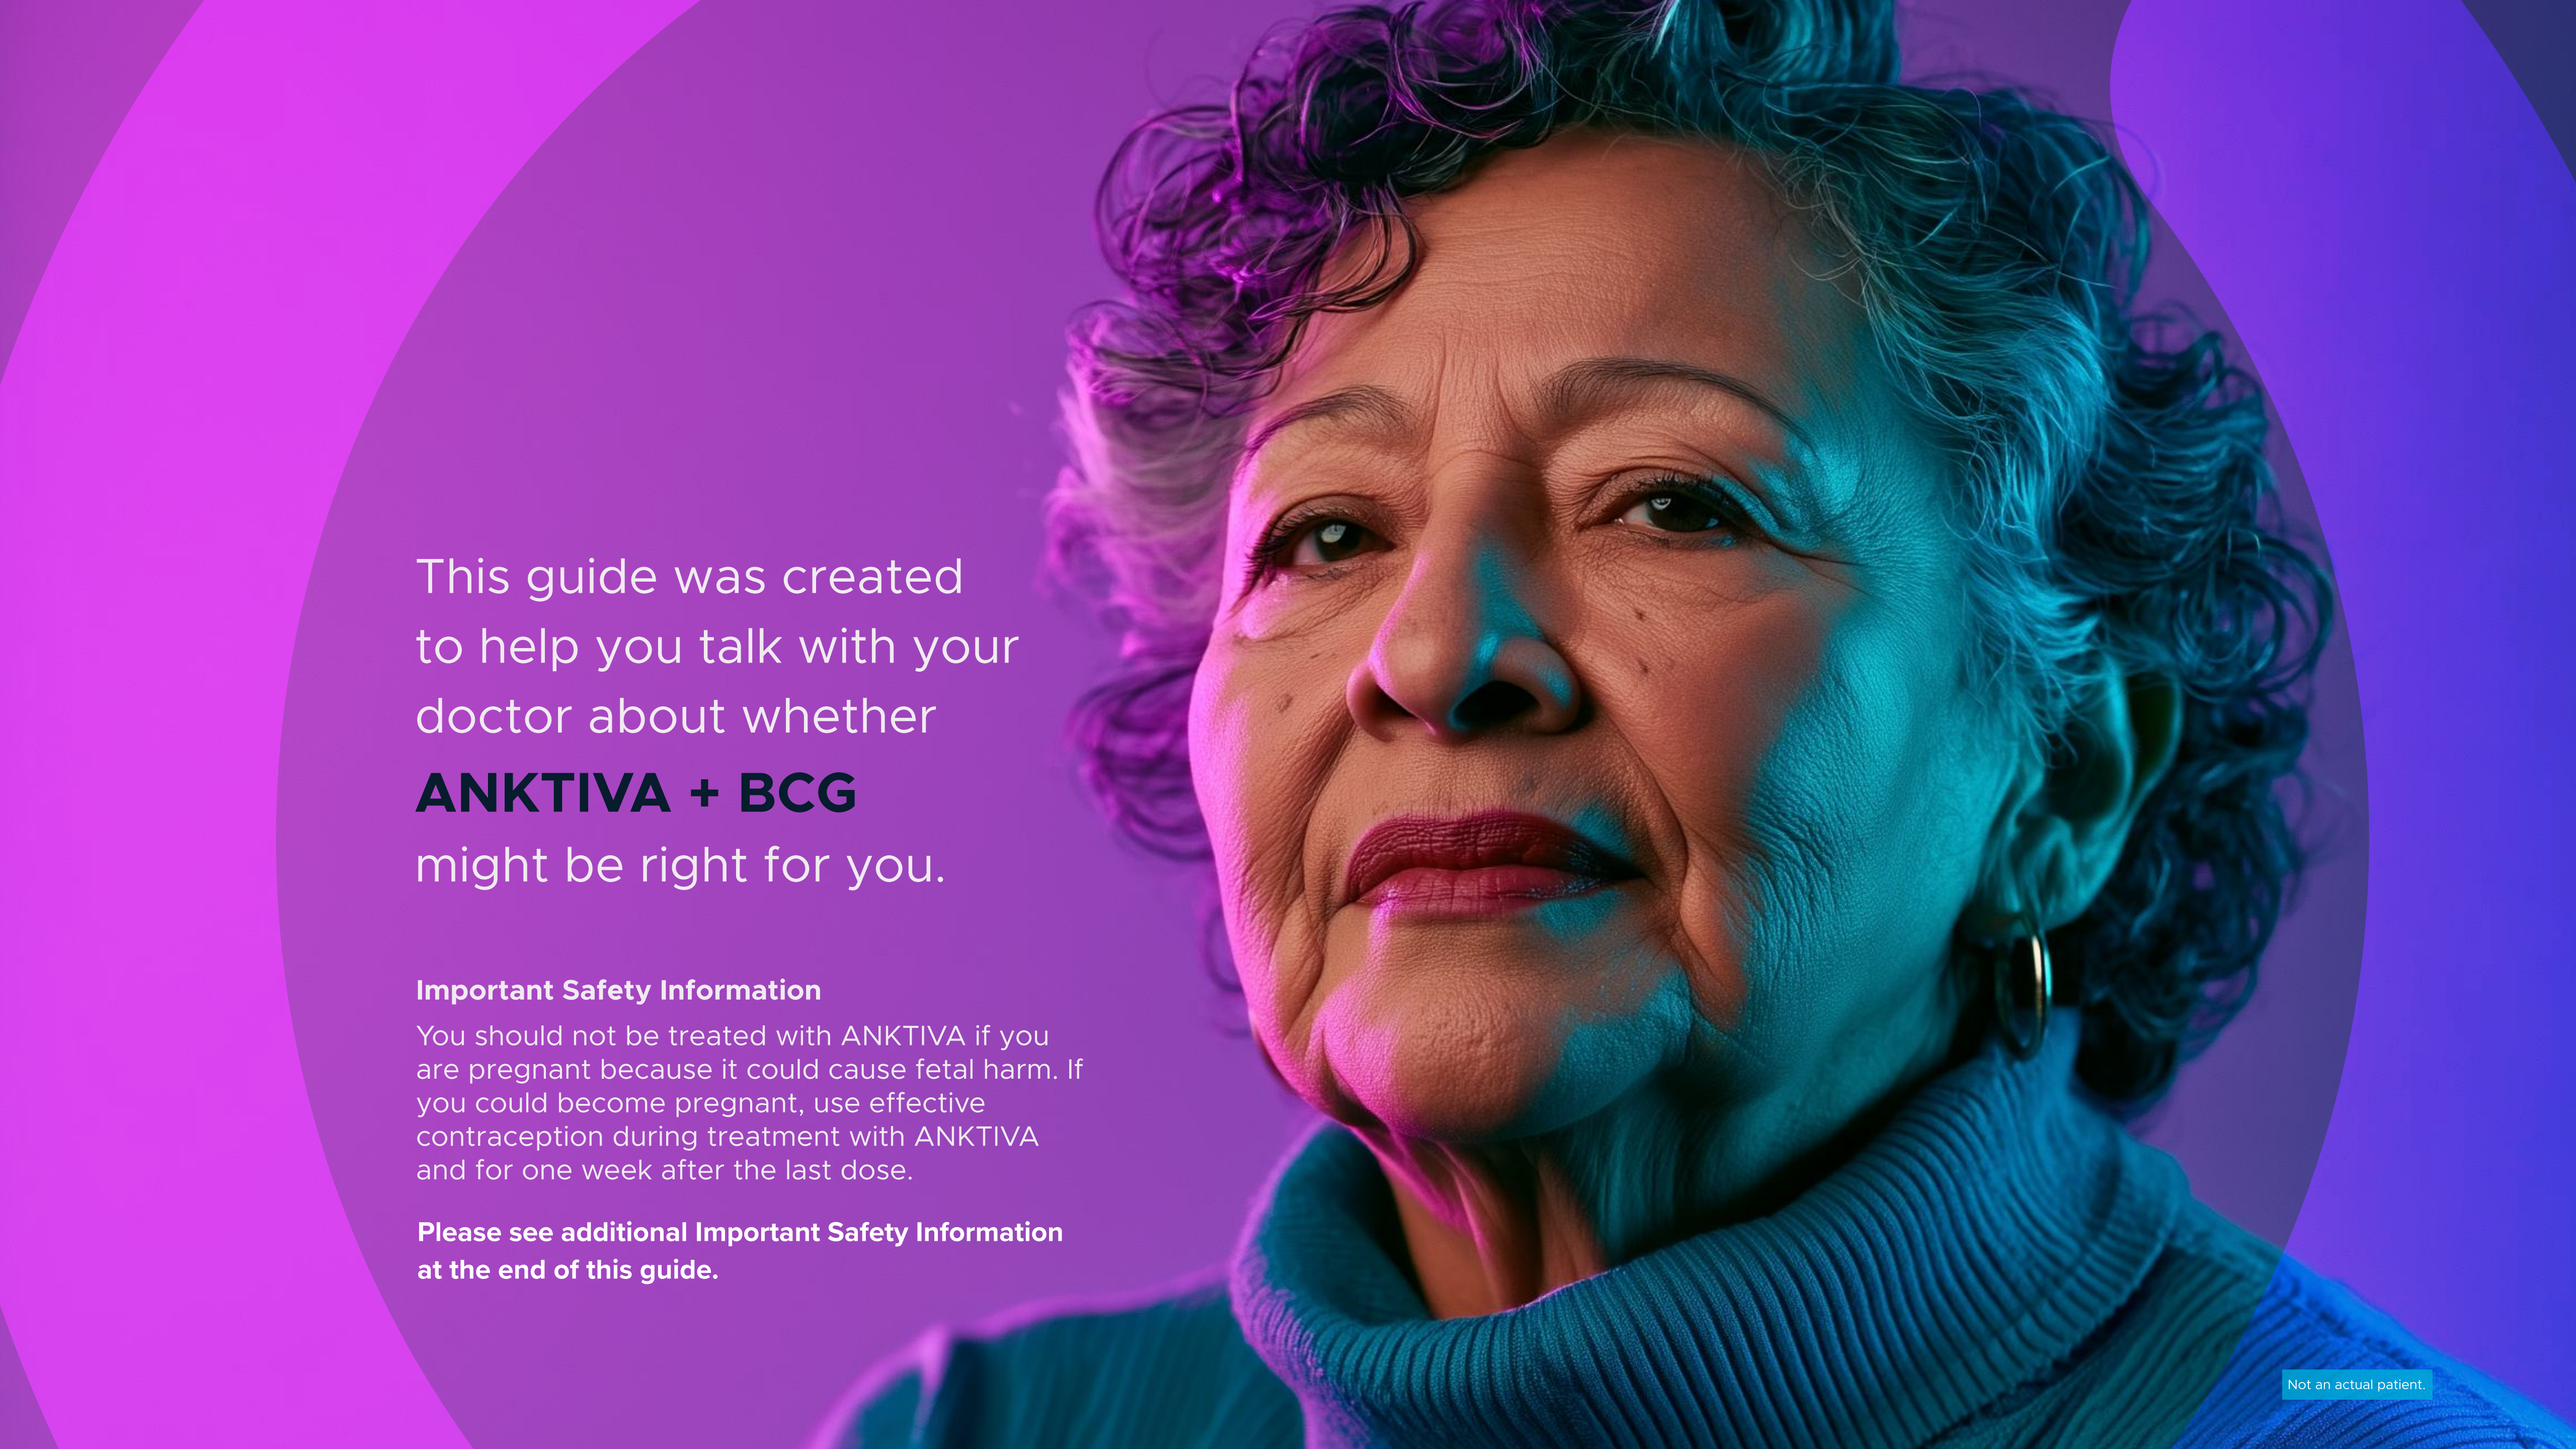

Please see Important Safety Information at the end of this guide.

This guide was created to help you talk with your doctor about whether **ANKTIVA + BCG** might be right for you.

Important Safety Information

You should not be treated with ANKTIVA if you are pregnant because it could cause fetal harm. If you could become pregnant, use effective contraception during treatment with ANKTIVA and for one week after the last dose.

Please see additional Important Safety Information at the end of this guide.

I'VE HAD BCG. I'VE GOT QUESTIONS.

If you're facing bladder cancer, **treatment decisions are personal**. If your cancer hasn't responded to BCG treatment or has come back, **you want to know what's next**.

STARTING WITH, WHAT'S NEXT FOR ME?

BCG is commonly used to treat certain types of bladder cancer.[2] But sometimes cancer doesn't respond to treatment or comes back afterward. If that's happened to you, it's important to know there may be other treatment options to discuss with your doctor.

OTHER POTENTIAL TREATMENT PATHS[2]:

Immunotherapy

Helps your body's immune system recognize and attack cancer cells. Different immunotherapies help the immune system fight cancer in different ways.

Chemotherapy (Chemo)

Uses medicines to kill fast-growing cancer cells or stop them from growing. But chemo can also damage healthy cells that grow quickly, which may cause side effects.

Surgery

Removes cancer from the body. For some people with high-risk bladder cancer that hasn't responded to BCG, doctors may recommend surgery to remove the bladder. **This is called a cystectomy.**

Clinical Trials

Research studies that test new treatments to see how well they work and how safe they are. Some may offer access to treatments not yet approved.

MY NEXT STEP?

GET TO KNOW ANKTIVA.

ANKTIVA is the FIRST FDA-approved, **chemo-free** immunotherapy used with BCG to treat adults with nonmuscle invasive bladder cancer (NMIBC) that hasn't responded to BCG.[1]

Important Safety Information, cont'd

Before treatment with ANKTIVA, tell your doctor if you are pregnant or suspect that you may be pregnant.

After treatment with ANKTIVA, tell your doctor if irritable bladder symptoms or passage of red-colored urine lasts longer than 24 hours.

Please see additional Important Safety Information at the end of this guide.

Not an actual patient.

BCG STARTED THE FIGHT.

ANKTIVA BRINGS MORE TO IT.

Your immune system has cells that help recognize and attack cancer. ANKTIVA works with BCG to help activate those cells.

1 BCG

Helps start an immune response in the bladder.

+

2 ANKTIVA

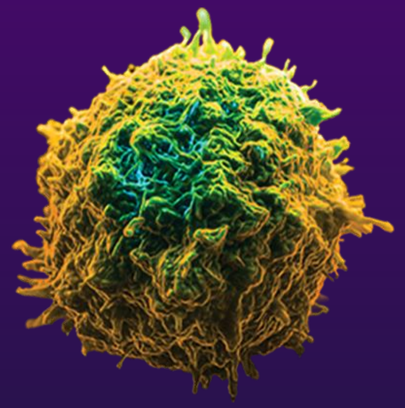

Activates certain immune cells and increases their numbers.

Important Safety Information, cont'd

The most common side effects may include changes in kidney-related lab tests, pain or burning when urinating, blood in the urine, needing to urinate more often or more urgently, urinary tract infection, higher potassium levels, muscle or joint pain, chills, and fever.

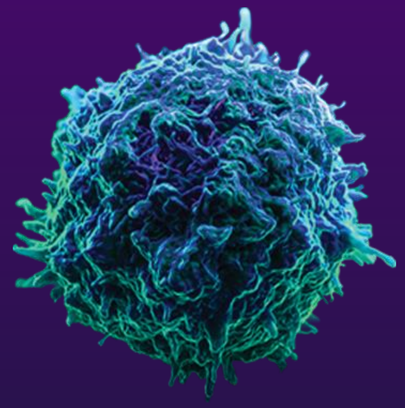

Please see additional Important Safety Information at the end of this guide.

MEET SOME OF YOUR IMMUNE SYSTEM'S DEFENDERS.

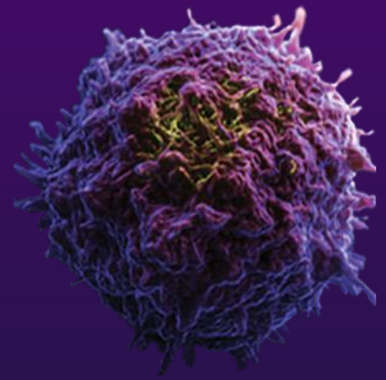

Natural killer (NK) cells

These cells can find and attack abnormal cells, including certain cancer cells.

CD8+ killer T cells

These cells can recognize and destroy cells that show signs of cancer.

Memory T cells.

These cells help your immune system remember threats it has faced before. ANKTIVA activates these cells and increases their numbers.

Please see additional Important Safety Information at the end of this guide.

MY NEXT MOVE?
I ASKED ABOUT ANKTIVA.

QUESTIONS TO ASK YOUR DOCTOR:

When it comes to bladder cancer treatment, your questions matter. And you deserve answers. Bring this guide to your next appointment to **start the conversation with your doctor**.

- [ ] **Is ANKTIVA + BCG an option for my type of bladder cancer?**
- [ ] **How is ANKTIVA different from the BCG treatment I've already had?**
- [ ] **What side effects should I know about?**
- [ ] **What would treatment with ANKTIVA + BCG involve?**
- [ ] **How well has ANKTIVA + BCG worked for other patients?**
- [ ] **How will we know if the treatment is working?**
- [ ] **How could ANKTIVA + BCG affect my other treatment options, including surgery?**
- [ ] **Will my insurance cover ANKTIVA + BCG, and is financial assistance available?**

Please see additional Important Safety Information at the end of this guide.

Important Facts about ANKTIVA® (nogapendekin alfa inbakicept-pmln)

What is ANKTIVA used for?

ANKTIVA is used with a drug called Bacillus Calmette-Guérin (BCG) to treat adults with nonmuscle invasive bladder cancer (NMIBC) that have not responded to treatment with BCG alone.

What warnings should I know about ANKTIVA?

Delaying bladder removal surgery (cystectomy) to treat your NMIBC could lead to the development of muscle invasive (or metastatic) bladder cancer, which can be fatal.

When should I not take ANKTIVA?

You should not be treated with ANKTIVA if you are pregnant because it could cause fetal harm. If you could become pregnant, use effective contraception during treatment with ANKTIVA and for one week after the last dose.

What should I tell my healthcare provider?

Before treatment with ANKTIVA, tell your doctor if you are pregnant or suspect that you may be pregnant.

After treatment with ANKTIVA, tell your doctor if irritable bladder symptoms or red-colored urine lasts longer than 24 hours.

What are the side effects of ANKTIVA?

The most common side effects may include changes in kidney-related lab tests, pain or burning when urinating, blood in the urine, needing to urinate more often or more urgently, urinary tract infection, higher potassium levels, muscle or joint pain, chills, and fever.

The risk information provided here is not comprehensive. To learn more, talk to your doctor about ANKTIVA. The FDA-approved product labeling can be found at www.ANKTIVA.com/PI or **1-877-ANKTIVA (1-877-265-8482)**.

You are encouraged to report negative side effects of prescription drugs to FDA. Visit www.FDA.gov/medwatch or call **1-800-FDA-1088.**
